Begum & Bike Ayaskan are a twin duo with an endless curiosity for design and fascination towards nature. They have founded Studio Ayaskan, a research-driven art & design studio, in 2016 following their Master's Degree at the Royal College of Art. They established the studio with the aim to explore and blur the boundaries between disciplines. With a conceptual approach the practice merges the experimental and poetic use of materials, technologies and nature's forces in order to explore connections between nature, time, objects and spaces. The studio's works span from products to spaces; including installations, artworks and design research.

With a high- tech low-tech approach, their keen interest in nature and technology led them to research ways nature can be incorporated into design. Winning the Terra Carta Design Lab, they took a more active role in tackling climate crises with Aerseeds. As a duo they believe that the best way to implement change comes from observing, loving and working with nature.
